CINEMA DSP HD³ with Rear VPS (Virtual Presence Speaker)

Three Yamaha high performance DSPs achieve high speed and large capacity audio signal processing. By using front, center and surround speakers to create a rear virtual speaker, CINEMA DSP HD³ can produce 11.1 channels even with a 7.1-channel speaker configuration. The total reproduction of spatial data, including the vertical axis, helps create an overwhelmingly realistic sound field.

New CINEMA DSP Program, Dolby Atmos[®] and DTS:X[™] with CINEMA DSP HD³

This receiver offers the new Enhanced CINEMA DSP sound field program, featuring a new sound field processing algorithm that increases the sound source motion tracking and spatial representation power of the latest formats, including 3D surround. It also supports Dolby Atmos and DTS:X playback with CINEMA DSP HD³, taking the surround sound experience to new heights.

YPAO[™]- R.S.C. with Precision EQ, Angle Measurement and YPAO 3D

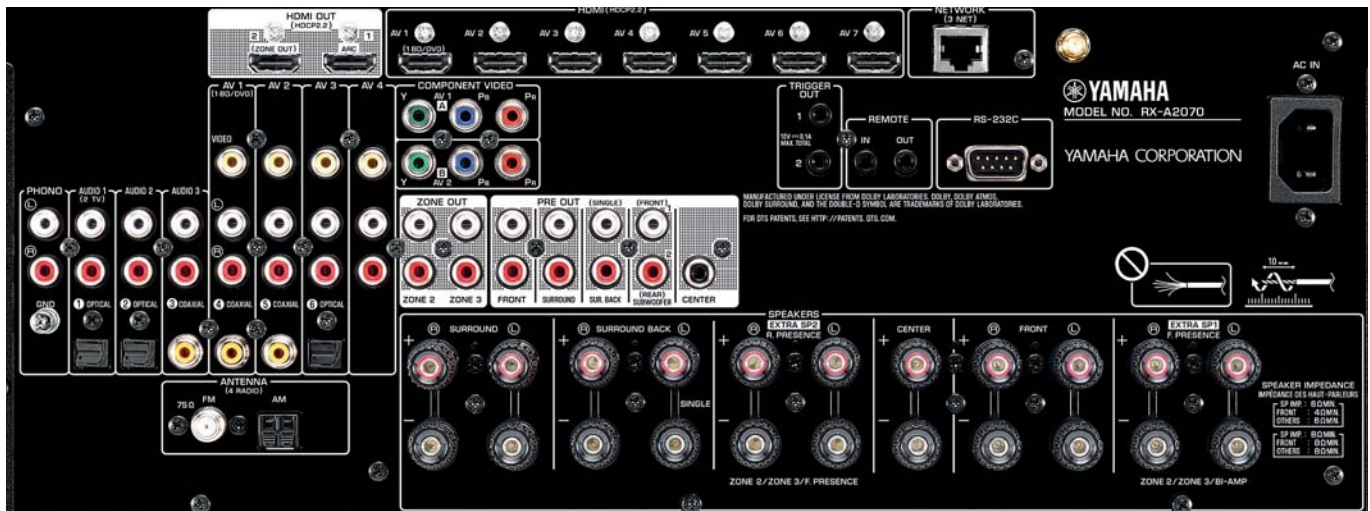

YPAO-R.S.C. analyzes the room acoustics with the included YPAO microphone to tune your system for the best sound in your room. It employs R.S.C. (Reflected Sound Control) to correct early reflections for studio-quality surround sound, and also 64-bit-operation Precision EQ and Angle Measurement for greater accuracy. YPAO 3D maximizes the 3D sound field effectiveness with Dolby Atmos[®] and DTS:X[™].
